

Reducing Slip and Falls at a Resort

A large private timeshare developer in America with over 7,000,000 yearly visitors to their timeshare resorts nationwide, has implemented a state of the art walkway safety program. This program is “real world,” taking place in active resort communities with heavy, consistent traffic patterns. Regular monitoring, or Slip Testing, of all hard walkway surfaces measures the available friction on floor surfaces (Dynamic Coefficient of Friction). The latest technology in slip testing utilizes the BOT-3000 Tribometer.

Prior to the launch of this program there were over 400 reported slip and fall incidents yearly, with over \$2.5 million in related costs. After only 3 months of implementing the program, the number of slip and fall incidents improved by nearly 90%. After one year of implementing the program, the rate of incidents dropped in excess of 95%. By the fourth calendar year, the number of reported slip and fall incidents dropped from the original 400 incidents per year to only 11 incidents per year.
